

KeeVac cleans up with Hannay Reels:

Reliable hose reels for a liquid waste services powerhouse.

Businesses have trusted KeeVac Industries since 2009 for all their liquid waste removal needs. From single-compartment units for septic and grease totes to dual-compartment trucks for portable restroom service, KeeVac does it all. Based in Denver, Colorado, KeeVac serves the entire US and its territories. KeeVac can equip any truck a customer needs to serve the liquid waste industry with vacuum tanks, vacuum pumps, and power-spraying equipment.

KeeVac Industries credits customer service as the key to their success. "We try hard to address any of our customer's needs," says KeeVac Purchasing Manager, Chase Augenstein. "We make exactly what people are looking for that is user-friendly and functional, instead of cookie-cutter stuff that doesn't fit their specifications. We won't send any truck out that we wouldn't want to drive ourselves."

KeeVac Industries is a family-owned-and-operated business. KeeVac serves all businesses that depend on trucks to thrive, so it's important that KeeVac delivers dependable product. "There are quite a few local customers who have my cell phone number and I've come out on weekends to get them parts to get a truck up and running when something goes south. We know the industry never stops," says Augenstein.

KeeVac began production in 2009, and it didn't take long for the company to find that a partnership with Hannay Reels would be the best fit for their customers. Durability, compact size, and ease of use are just a few of the reasons Hannay hose reels stand above the competition. "We're steadfast on Hannay reels. We've tried a couple of other reels, but they just don't hold up and don't have the quality we expect a hose reel to have," says Augenstein.

The reel used most by KeeVac Industries is the Hannay N700 Reel. Hannay N700 Reels are utilized for washdown of porta potties, as well as replenishing the five gallons of water in a porta potty when emptied. There are also times when a garden hose won't do, and a higher pressure rating is needed for power washing portable restrooms. KeeVac will utilize Hannay N800 Reels with a larger hose size when one of their customers requests a higher flow rate to fill a five-gallon bucket quicker.

The rugged reliability of Hannay reels has been put to the test by the harsh conditions in liquid waste management, but the product has proven to be worthy of its reputation. Chase Augenstein says, "We haven't had a Hannay reel that needed service in over two years." When they do need service, Hannay reels are easy to maintain and built in a way that makes parts easy to replace. "Vibration-resistance is a big reason we choose Hannay reels. Many hose reels on the market don't hold up to the abuse of the industry, and that's never been a problem with Hannay," states Augenstein.

The partnership between Hannay Reels and KeeVac Industries is innovative. Hannay is willing to address unique circumstances KeeVac customers may face. Currently, one of KeeVac's clients runs a corrosive magnesium chloride brine in their water. They have requested a hose reel with a stainless-steel fluid path, so it doesn't take abuse from the brine. Hannay is working to create a design that will fulfill this need.

Want to see if a Hannay reel would improve operations for your business? Check out our Reel Packages with hose or cable already installed.

KeeVac Pumper Truck, equipped with a Hannay reel for extreme washdown applications. ▼

Compact, narrow-frame spring rewind reels, ideal for washdown operations and water replenishment.
